

Helping Meet Your Environmental Sustainability Priorities

We care about the legacy we leave. That's why we provide market-leading recyclable products that enable our customers to make sustainable choices, without compromising on performance or quality.

AMCO-GIFFEN

By choosing d² Dura Platform Type 40 for Poynton Station,
you will achieve an embodied carbon saving of

597,000kg CO₂e

versus a comparative pre-cast concrete platform available elsewhere in the industry.

That's equivalent to the carbon emissions from **driving 2,842,695 miles in a diesel car**, taking **1,761 economy flights from London Heathrow to Dubai**, or **the annual carbon absorption of 27,135 mature trees**.

By choosing d² Dura Platform, Amco Giffen is playing its part in reducing the environmental impact of its operations.

Since the launch of our re-engineered d² Grating in 2019, we've saved over 2.3 million kilograms of raw materials. Comparing this with our former d¹ Grating (or the old design grating available elsewhere in the industry), d² has led to an amazing saving of nearly 8 million kilograms of CO₂e.

To offset this amount of carbon, you would have needed to plant over 1.1 million trees and let them grow for ten years, which would cover an area of over 500 football fields!
