Anti-Slip Grating Access Ramps to Solve Any Access Issue

Dura Composites offer a wide range of heavy-duty and lightweight disabled access ramps to create accessible weatherproof areas for wheelchair users, scooter users and to make the use of walking aids more manageable.

Suitable for permanent or de-mountable structures wherever regular access is required, Dura Grating ramps have an advanced anti-slip GRP surface tested to over a million footfalls for improved grip in wet conditions.

Available in a range of colours and thicknesses to suit all threshold requirements, the mini mesh grating can be supplied now from UK stock for on-site fabrication, or supplied fully fabricated using our GRP Dura Profile channel for speedy installation. We also offer anti slip GRP floor sheets to be added as a topping surface to other structures as well as covered Dura Grating for situations where no drainage is required.

Key benefits of Glass Reinforced Polymer Dura Grating include:

- Unique high specification anti-slip surface tested (in accordance with BS 7976-2:2002+A1:2013) and achieves ultra-low slip potential in both wet and dry conditions.
- Maintenance free - does not rot, corrode or splinter.
- Small holes of the mini mesh are compliant with European 20mm Ball Fall Test and are suitable for all wheeled vehicles and footwear.
- Consistent and long-lasting colours – available in Teak, Dark Grey, Light Grey, Yellow, Sand and Green.
- Dura Grating is available now for immediate despatch from our East of England HQ.
